Group A Exp # 6: Silver Equilibrium

2026/2/24 By Yuchen Shi with Yizhe Dai & Siqi Li

1. Experiment Set-up

(1) Calibration

{ Voltage #1 : 1.60 V
{ Voltage #2 : -1.59 V ⇒ Used to calibrate Logger Pro probe

2 second = 1/sample +3000 s total length
100 stir/min

(2) Material

① 0.001 M $AgNO_3$ in 0.01 M NH_4NO_3
② 0.001 M NH_4Cl ⇒ muddy (milky)
③ 0.1 M $CuSO_4$
④ 0.01 M KI ⇒ green ⇒ milky
⑤ 2.0 M NH_3/NH_4OH in 0.01 M NH_4NO_3 ⇒
clean again

(3) Important Operations

① Electrode

* Clean silver wire in hot Na_2CO_3 solution with aluminium foil
& Careful place copper wire above salt bridge. but not in touch with it

② Salt Bridge

* Prepared already, filled with $CuSO_4$ solution in the electrochemical cell
